FRCPATH Part 2

Practical-emphasis preparation built for international medical graduates. Candidates train on the specimen types, reporting style and time pressure of the actual exam, with structured feedback on every practice case.

Included in every Part 2 track

- Exam-pattern digital slide libraries — surgicals, frozen sections, cytology
- Onion Skin Technique applied to long and short cases
- Timed mock examinations with structured feedback
- Hybrid mentorship from FRCPATH-experienced faculty
- Reporting-language coaching to UK standards

Specialties we prepare

Part 2 is sat in a single chosen specialty and each examines differently. We run eight tracks, each built around the practical format that specialty actually uses.

Histopathology

General surgical pathology across all organ systems, with embedded cytopathology and autopsy components. The broadest and most attempted track.

Paediatric & Perinatal Pathology

A dedicated track distinct from adult histopathology. The current format splits paediatric surgical pathology and perinatal pathology into separate modules.

Neuropathology

Standalone exam covering central nervous system, nerve, skeletal muscle and neuro-oncological pathology.

Dermatopathology

Inflammatory and neoplastic skin disease. Taken as a sub-specialisation or standalone diploma credential rather than a Part 2 specialty.

Haematology

Intensive multi-day practicals dividing morphology, transfusion medicine, and haemostasis and thrombosis.

Clinical Biochemistry

Laboratory automation, toxicology, metabolic disorders, endocrine testing and biochemistry data interpretation.

Immunology

Primary immunodeficiencies, autoimmune and allergy testing, and running an immunology laboratory service.

Genetics / Molecular Pathology

Genomic diagnostics, variant interpretation, cytogenetics and NGS data analysis.

Exam formats are set by the Royal College of Pathologists and change between sittings. Confirm the current structure for your specialty at rcpath.org before applying.

HOW WE TEACH IT

The method

These four components run through every Mendel track and are what separate our preparation from passive video courses and question grinding.

Onion Skin Technique

Layered dissection of MCQ stems and cases — peeling each distractor back to the reasoning that generated it, so recall survives exam pressure.

Mendel Chitras

Visual mnemonics built for recall under time constraint, used heavily for syndromes, marker panels and classification systems.

Hybrid mentorship

Scheduled contact with faculty who have sat and examined these papers. No candidate prepares alone or guesses at reporting standards.

Candidate community

Access to a cohort of candidates and alumni who have cleared the same exam, for case swaps, mock vivas and the practical logistics.

Other Mendel tracks

Each track has its own curriculum document. Ask us for any of these, or download them from the board preparation page.

Track	Region and format
FRCPPath Part 1	UK · Written
NEET-SS Pathology	India · Entrance
ABPath Subspecialty	US · Boards

NEXT STEP

Request a quote

We do not publish a single price list. Fees depend on the specialty you sit, how long you need access, and how much one-to-one mentorship you want. Tell us where you are in your preparation and we will send a written quote.

What we need from you	Why it changes the price
Specialty within the track	Slide libraries and faculty differ per specialty
Target sitting date	Determines programme length and revision intensity
Attempt history	Repeat candidates get a diagnostic and a narrower plan
Mentorship level	Group teaching versus one-to-one case review
Cohort or individual	Institutional and group rates are quoted separately

Request your FRCPATH Part 2 quote

Use the quote form on the board preparation page, or email us with the five details above and we will reply with a written quote and a recommended start date.
